- ➔ SecureOps for the hospitality industry

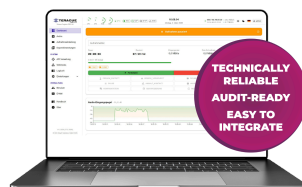

STREAM CAPTURE PRO

The next generation of tamper-proof stream recording

Dear customers and business partners,

With EU regulations on the audiovisual recording of interrogations, transparent and traceable documentation processes are becoming increasingly important. As a result, the need for reliable and legally compliant recording technology is growing.

Our new audit-ready IP stream recorder enables tamper-proof recording and playback of audiovisual streams and is also suitable for compliance recording in broadcast environments, training scenarios, and other applications requiring documentation.

Stream Capture PRO-X5

Audiovisual recording,
playback, archiving,
and transcription
of content

With the GSS solution, you receive a professional recording server for applications where **data integrity**, **traceability**, and **ease of use** are critical.

Establish a robust and compliant foundation for your projects:

Areas of application

- Justice: interrogations and court recordings
- Police: audiovisual interrogations
- Compliance- and audit-proof stream recording

Key features

- Recording, playback, and archiving (optional transcription)
- Traceable data generation and tamper evidence
- Monitoring and control of input and write rates
- Intuitive operation for standardized workflows
- API interface for integration into media control and control room systems
- Pre-configurable markers for structured event documentation with metadata
- PDF generator for structured, verifiable logging of event and system data
- Exportable standalone HTML multiview player for playback in standard browsers – without vendor lock-in and without proprietary runtime environments

WORTH KNOWING

The EU Cyber Resilience Act (CRA) strengthens the European Union's requirements for the security of digital products and systems – regardless of their specific area of application.

The regulation requires manufacturers to incorporate cybersecurity into the development and operation of their solutions and to provide secure, traceable, and tamper-resistant systems throughout the entire lifecycle.

Our solution already meets these requirements and supports organizations in reliably complying with regulatory requirements as well as internal compliance and governance standards.
