FACTORY
A GSS BRAND

WHY EMMA?

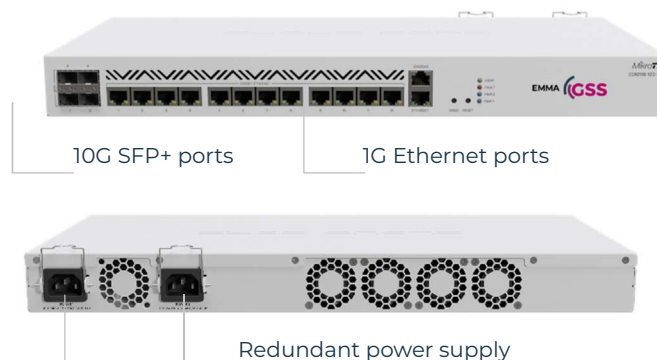

Our software solution **EMMA** enables you to manage and streamline electric vehicles and their charging infrastructure. This makes it easy to control the operation of electric vehicles efficiently. The application includes features such as monitoring, charging planning, tracking of charging units, billing management, and integration of charging stations into a network.

EMMA simplifies the use of your electric vehicles by facilitating access to charging points, monitoring energy consumption, and enabling efficient billing. Access to real-time data allows users to view current charging availability and optimization options for charging times. This makes **EMMA** an important component for the success of your sustainable e-mobility.

APPLICATIONS

- ✓ **FOR GUESTS AND VISITORS**
Easy use of charging stations, automated billing, and real-time information on availability and charging times.
- ✓ **FOR TENANTS AND PARKING SPACE USERS**
Simple management of charging points, optimization of charging times, and transparent billing for charging processes.
- ✓ **FOR EMPLOYEES AND STAFF**
Secure and simplified user management, billing management, monitoring, and optimization of charging times for employees and fleet vehicles.

CCR2116-12G-4S+

FEATURES OVERVIEW

- One-time purchase
- Standalone software solution
- Manufacturer-independent compatibility
- Centralized charging card management
- User management and access controls
- Security and data protection
- Cost center management
- Billing management
- Real-time monitoring and reporting
- Charging time optimization
- Fleet management integration (load management)
- Energy management and sustainability
- Network-independent RFID card readers
- Individual scalability

EMMA V1 | STAND 2025-08

EMMA STANDS OUT

EMMA - E-Mobility Management Appliance - is a comprehensive software solution for the efficient management of charging stations and RFID charging cards.

EMMA offers a real-time monitoring of the status of all connected charging points to ensure an overview of the operating status at all times. By managing the charging points, it is possible to restart or initiate charging processes remotely, which guarantees flexible use.

The OCPP 1.6 open communication standard permits charging stations from different manufacturers to be easily integrated and centrally managed.

All charging processes and status changes are seamlessly recorded, while filter and search functions allow log data to be analyzed efficiently.

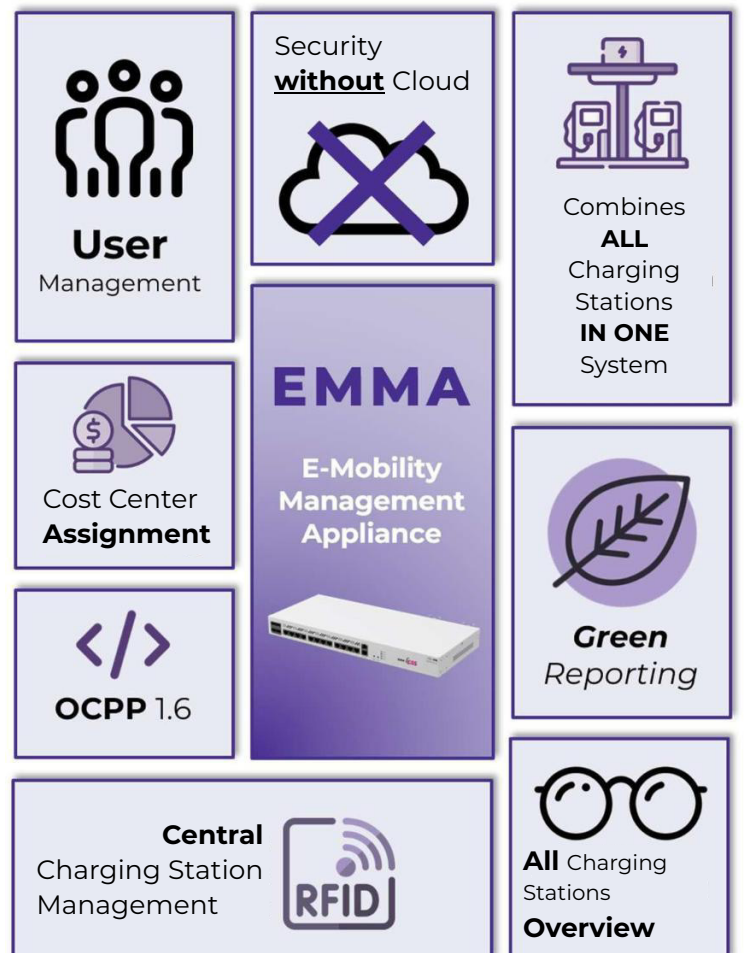

Additional convenience for data analysis is provided by the option to export these logs in common formats.

EMMA provides a central platform for managing RFID charging cards, allowing cards to be easily activated, deactivated and assigned to specific fields. Thereby ensuring targeted billing and traceability.

Furthermore, the import and export of token IDs allows fast data migration and integration into other systems. The reporting system offers comprehensive functions for creating individual reports that include specific charging and usage data.

Monthly and annual overviews generate detailed analyses for billing and evaluations, which can be easily exported as PDF or CSV files.

The system also features user-friendly user and location management. This includes the central administration of user accounts, access rights and roles as well as the flexible organization and configuration of multiple charging infrastructure locations.

EMMA equips companies with a powerful, versatile and sustainable software solution for optimizing their e-mobility infrastructure.

EMMA FEATURES

Specifications		
Dimensions	443 x 199 x 44 mm	
Tested ambient temperature	-20°C to 60°C	
Power supply		
AC input	100-240	
Frequency (Hz)	47-63	
Max. power consumption	83 W	
Max. power consumption without accessories	60 W	
Ethernet		
10/100/1000 Ethernet-Ports	13	
Fiber		
SFP+ Ports	4	
Certifications & accreditations		
Certification	CE, EAC, ROHS	
Included accessories		
2x IEC cables	Rack mount bracket, white	K-57 Kit
		
The device has a pre-installed and licensed operating system. No separate purchase is required and the product is ready for immediate use. The device includes free software updates for the lifetime of the product or at least 5 years from the date of purchase.
